

## CONTENTS

Paper # Page #

### SECTION 1.

#### Studies of antitumour alkylating agents

|     |                                          |         |          |
|-----|------------------------------------------|---------|----------|
| 1.1 | CB1954                                   | 1 - 4   | 1 - 21   |
| 1.2 | Dimethyltriazenes                        | 5 - 9   | 22 - 49  |
| 1.3 | Imidazotetrazinones and<br>nitrosoureas. | 10 - 15 | 50 - 83  |
| 1.4 | Model compounds                          | 16 - 21 | 84 - 123 |

### SECTION 2.

#### N-Methylformamide: a cytotoxic and differentiating agent

|     |                                                              |         |           |
|-----|--------------------------------------------------------------|---------|-----------|
| 2.1 | The antitumour activity of<br>N-methylformamide              | 21 - 28 | 124 - 176 |
| 2.2 | N-methylformamide and the<br>differentiation of tumour cells | 29 - 33 | 177 - 226 |

### SECTION 3.

#### Membrane targets for antitumour agents

|     |                                                            |         |           |
|-----|------------------------------------------------------------|---------|-----------|
| 3.1 | The cell membrane as a target for<br>antitumour drugs      | 34 - 37 | 227 - 306 |
| 3.2 | Interactions of nitrogen mustard<br>with the cell membrane | 38 - 40 | 307 - 332 |
| 3.3 | Interaction of Adriamycin with<br>cell membranes           | 41 - 46 | 333 - 368 |
| 3.4 | Related membrane studies                                   | 47 - 50 | 369 - 388 |
